DRM-07

Microwave motion sensor,
with presence detector

519083121599876

Do not dispose of this device in the trash along with other waste!

According to the Law on Waste, electro coming from households free of charge and can give any amount to up to that end point of collection, as well as to store the occasion of the purchase of new equipment (in accordance with the principle of old-for-new, regardless of brand). Electro thrown in the trash or abandoned in nature, pose a threat to the environment and human health.

Purpose

The motion sensor is used for automatic and temporary switching on of lighting if a person or other object appears in places such as hallways, courtyards, driveways, garages, etc.

The sensor can detect movement through wooden, plasterboard, glass and plastic panels.

Functioning

The DRM microwave sensor operates as a radar by using high frequency electromagnetic waves to detect movement in a monitored area. It is most effective when the movement takes place directly towards the sensor. In addition, the DRM has a built-in twilight switch that prevents the controlled lighting from switching on during the day. When motion is detected after dusk, the lighting will be switched on and will remain on as long as motion is detected. When the movement stops, the light remains switched on for a specified back-up time, after which it is switched off.

If motion is detected again during the back-up time, the cycle will start from the beginning. **Due to its high sensitivity, the DRM can act as a presence sensor.** The accuracy of the sensor operation does not depend on the temperature. The detection range, the brightness level that activates the sensor and the time of operation back-up are set using the knobs described later in this manual. The sensor is designed for indoor use.

The power of microwave radiation is relatively low and completely safe for humans and animals. Its value is below 10 mW. In comparison, a microwave oven and a mobile phone radiate with a power of approx. 1000 mW.

Diagram

Working mode (ON/OFF/AUTO)

- AUTO – automatic switching on and off
- ON – permanent switching on of the sensor contact (closed output)
- OFF – permanent contact deactivation (open output)

Settings

Twilight switch sensitivity (LUX)

Sensitivity of the twilight switch can be adjusted in the range of 3÷2000 lx. Turning the knob towards the value „3” will switch the lighting on later, turning the knob towards the „sun” will switch it on earlier. To keep the sensor active throughout the whole day, turn the knob as far as possible towards the „sun”.

Detection area (SENS)

The detection radius of the sensor can be adjusted from 5 m to 15 m (parameters given for a sensor mounted at a height of 1÷1,8 m).

Turning the knob clockwise [max] increases the detection area, turning it counterclockwise [min] decreases the detection area.

Switch-on time (TIME)

The switch-on time of the receiver can be adjusted in the range from 10 s (± 3 s) to 12 min (± 1 min.).

Turning the knob clockwise [max] increases the switch-on time, turning it counterclockwise [min] decreases the switch-on time.

Mounting

1. Disconnect power supply.
2. Make a mounting hole in the substrate and embed the flush-mounted box $\varnothing 60$.
3. Undermine the catch with a flathead screwdriver and remove the outer cover of the sensor.
4. Connect the wires as shown in the diagram.
5. Insert the body into the flush-mounted box and screw in place.
6. Set the detection field area, the sensitivity of the twilight automatic control unit and the switch-on time.
7. Assemble the external cover of the sensor.
8. Connect power supply.

After activation the motion sensor is inactive for the first 10 seconds.

Wiring diagram

Technical data

power supply	195÷265 V AC
maximum load current (AC-1)	6 A*
frequency of microwaves radiation	5.8 GHz
radiation power	0.2 mW
motion detection	0.6÷1.5 m/s
detection field	180°
maximum detection radius (adjustable) for H= 1÷1.8 m	1÷8 m

* Load of a resistive nature [AC-1].

For loads of a different nature (e.g. LED lighting), the maximum load current may be significantly lower.

www.fif.com.pl/en/content/24-wskazowki

Technical data cont.

activation threshold (adjustable)	3÷2000 lx
switching time (adjustable)	10 s (± 3 s)÷12 min. (± 1 min.)
activation delay	1 s
power consumption	0.9 W
terminal	1.0 mm ² screw terminals
tightening torque	0.5 Nm
working temperature	-25÷50°C
dimensions	
external	80×80×48 mm
groove	∅55 mm, H= 33 mm
mounting hole	∅60 mm
screw spacing	58 mm
mounting	in ∅60 flush-mounted box
mounting height	1÷1.8 m
ingress protection	IP20

Warranty

The F&F products are covered by a warranty of the 24 months from the date of purchase. Effective only with proof of purchase. Contact your dealer or directly with us.

CE declaration

F&F Filipowski L.P. declares that the device is in conformity with the essential requirements of The Directive 2014/53/EU of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC.

The CE Declaration of Conformity, along with the references to the standards in relation to which conformity is declared, can be found at www.fif.com.pl on the product page.
